Conference Call 8/22/01

NPIRS Processing

Later this morning, we are going to look into the problem of Navajo and Aberdeen records showing up in Oklahoma exports. We are preparing to reprocess all CHS638 files and to move/copy dental records from the APC Table to the Dental Table. After the CHS638 files are reprocessed, regular processing of export files will resume. The next monthly production of Workload and User Pops is scheduled for the first week of September.

Data Warehouse

Cherokee exports came in Tuesday. AIB field counts will be examined to make sure it is working well, then the Cherokee files will be run through AIB this morning. CHS FI has sent cartridges containing exports; raw CHS638 export files are ready as are the raw Denrun files. Penobscot is not ready; the site is awaiting receipt of reports.

The exports for the PDW will serve as pilots for the comprehensive exports for the full warehouse. George will continue to work on the Registration export for the complete reload.

Testing of the PDW will include comparisons between the site PCC Management 1A report and at the PDW using NPIRS 1A report. We will prepare seed data with which to test PDW processing and reporting, and will include measures by which to QA the data at each step of its movement and processing.

Source to Target mapping of Metadata: We will involve Lois Boyd in this documentation effort. Karen and Stephanie entering the target information that describes the type of transformations (necessary concatenation, changes, etc.).

Access and Use Guideline

Release of this document will be delayed until after the physical move of headquarters offices. Edna is system owner and requests for data must carry her approval.

Unduplication

Tony and Mike have installed Vality on the Server.
